

Junior APC Engineer

Who are we:

Maraton-Mérnök delivers services in the industrial automation area from controller tuning to high level production optimization. Our experienced engineering team is qualified to design, develop and implement systems such as Advanced Process Control (APC), Blending and Movement Automation (BMA) and Operator Training Simulator (OTS). Industry leaders of oil & gas, refining, petrochemicals and energy industries use our solutions. We are proud of our achievements, making technologies more efficient and safer!

What do we expect:

- Fresh graduate (finished studies or close to graduation)
- Minimum BA in chemical or electrical engineering or comparable
- Automation specialization is preferred
- Knowledge and interest in industrial technologies, processes and control
- Understanding computer systems and networks (DCS)
- Programing or scripting knowledge is advantage
- High level of independence, self-organized personality
- Willingness to travel
- English language

What we can offer:

- Participation in challenging automation, APC and modeling projects. Various solutions, various technologies
- Working with cutting edge industrial control technologies from market leader companies like Honeywell, Emerson, Yokogawa
- Creative tasks, opportunity to implement your own ideas
- Dynamically changing work environment
- Working with senior team of specialists
- Mentoring, continuous development
- Projects worldwide, frequent traveling
- Location: Budapest, Hungary

Keywords: industrial automation, APC, BMA, OTS, DCS, project work
