

QA Automation Engineer

[Trax](#) - world's leading image recognition platform for retail - is looking for a QA Automation Engineer to join its Budapest team!

Responsibilities:

- Working together with the agile developer team to contribute and develop automation testing frameworks
- Review all technical documents and tickets to provide timely and meaningful feedback (gather detailed information from Product Manager, Team Lead, QA, and developer colleagues)
- Create detailed, comprehensive, and well-structured test plans and test cases (with proper test data) with focusing on automation
- Develop automation testing for the new features and maintain the regression automation test set
- Identify, record and track bugs
- Be part of E2E testing processes with other QA members

Requirements:

- At least 2 years of expertise in the QA field (web-based application testing experience advantage)
- At least 1 year of expertise in writing test automation scripts (Selenium or Cypress preferred)
- Knowledge of programming languages related to test automation (JavaScript preferred)
- Experience writing SQL queries (MySQL advantage)
- Strong knowledge of software QA methodologies, tools and processes
- Ability to pick out software bugs and demonstrate good analytical skills
- Experience in the usage of test management tools (PractiTest advantage)
- Experience in ticketing system (Jira advantage)

Advantages:

- Having a degree in IT/Engineering
- Having ISTQB certificate
